Smooth File Management, Sharp Photo Editing

ACDSee Photo Studio Professional 2026 is equipped with a versatile toolkit that combines cutting-edge, locally powered Artificial Intelligence (AI) with renowned digital asset management and advanced RAW image editing. Stay firmly in command of your creative world as AI-driven tools handle the time-consuming tasks, leaving you free to focus on refining details, perfecting every shot, and keeping your growing image library effortlessly accessible.

RAW Photo Editing

Intuitive and non-destructive RAW photo editing at your command. In Develop Mode, the Masking Group helps you quickly select parts of your image for editing – whether you're making simple adjustments or working with more complex selections. You can easily adjust the selection mask to cover exactly what you need, without affecting the rest of the image. Fix color, balance lighting, and restore image quality using tools like Color and Tone Wheels, Light EQ™, Clone tool and more, all without permanently changing your original file. When working with large batches of photos, use AI Develop Presets that automatically adapt to each image individually, so you can apply consistent edits across many shots and save hours of manual work. ACDSee gives you the tools to get the job done your way, fast.

Digital Asset Management

The larger your digital asset archive, the more power you need to tame it – and that's exactly where ACDSee delivers. Advanced AI-powered Digital Asset Management tools help you organize and search photos without losing momentum. Skip the slow imports, ACDSee connects directly to your hard drive and gets to work, completing the laborious tasks for you. As you navigate your photo collection, add ratings, tags, categories, keywords, location data, customizable color labels, and other metadata to keep everything perfectly organized. With powerful search tools like AI Keywords, Advanced AND/OR Search, and Quick Search, finding the exact shot you need takes seconds – not hours – leaving you free to continue your photo management pursuit. Easily eliminate duplicates and streamline your workflow using batch functions – like resizing, renaming, or converting file formats – and more. With AI Face Detection & Facial Recognition, your photo library becomes more intuitive. ACDSee automatically detects the faces in your photos so you can name them for quick searching. Once you begin, the software will immediately learn which names to put to which faces and suggest possible matches when needed. Accept or reject AI-generated suggestions in batches and watch as your collection aligns itself with the people who matter most to you. Whether you're cataloging decades of family history or managing professional shoots, ACDSee gives you the speed, accuracy, and flexibility to stay ahead without missing a moment.
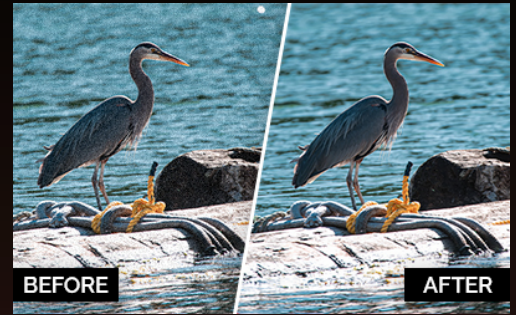

What's New in Photo Studio Professional 2026?

NEW

AI Denoise

AI Denoise uses advanced machine learning to automatically detect where to reduce pixelated noise in your photos, so the important details stay sharp. Instantly clean up high-ISO shoots or grainy snaps to keep your images natural, sharp, and ready to shine. Run AI Denoise on an entire batch and cut down on editing time, while your photos emerge clean, detailed, and true to life.

BEFORE AFTER

BEFORE AFTER

NEW

AI Hair Masking

Save even more time while editing your photos by letting ACDSee's intuitive AI Hair Masking make one-click hair selections for you. This allows you to adjust the color and lighting of one of the trickiest elements in portrait photography – hair – without affecting the rest of the image.

NEW

AI Develop Presets

Intelligent, non-destructive style at your fingertips. AI Develop Presets are an absolute game-changer for hobby and commercial photographers alike. When applied to a batch of photos, the AI analyzes each individual photo and applies gorgeous adjustments, significantly reducing the time you spend editing. Make your subject pop, correct background lighting, or imprint your authentic style on an entire catalogue of images with just a few clicks.

NEW

Video Metadata Support

Your video files are now a seamless part of your workflow. View GPS details and standard metadata fields in the Properties pane's default view, or dive deeper into the video and audio streams with the new All Video Metadata view. With Advanced Search supporting video-specific fields, and many new Auto Categories to search your video files, you have everything you need to organize and manage your videos – on your terms.

NEW

Expanded Activity Manager

No more waiting for tasks to complete—thanks to the updated Activity Manager, background processing lets you continue working while operations run. With multi-threading, multiple activities run simultaneously, so you can import, export (one of the most requested enhancements), convert and resize batches of photos, apply Develop presets, and detect faces and keywords, all without ever slowing down. Track progress in real-time and experience a faster, more efficient workflow designed for high-volume demands.

NEW

ACDSee Home Page

Take charge of your workflow from the moment you launch ACDSee. The new Home Page gives you immediate access to essential tools. Jump into Quick Searches, filter your photos with one-click options like Recently Modified or Tagged, and perform common tasks such as creating or importing images, finding duplicates, or cataloging files—all from a single screen.

... and so much more!
