Top Features

Erase and Replace

Take what you want from your photos, and integrate the rest. Select unwanted objects for removal and use the Smart Erase function to fill in the area with a matching background. This content-aware tool will produce a natural result even while extracting elements like telephone poles, crowds of strangers, imperfections, ominous clouds—whatever you want.

Deform and Reform

Creative image manipulation has never been so fluid. The Liquify tool allows you to distort objects in images without compromising quality. Shift, pinch, bulge, or restore. Develop free-flowing designs, or retouch portraits by moving pixels without altering them.

Trigger App-y

With ACDSee Mobile Sync, you can wirelessly and instantly send photos and videos directly to ACDSee Photo Studio from your mobile device! Just select and send. Available on iPhone and Android, the ACDSee Mobile Sync app keeps track of which photos have been sent, so you don't have to.

Perfect Exposure – Every Time

No matter the lighting or weather, make your subjects pop! With our patented Light EQ™ technology, you can intuitively correct lighting and exposure by lightening shadows and darkening highlights. You can adjust specific areas without affecting the image as a whole, achieving image-wide balance.

Rearrange, Add, Remove, and Adjust Layers

Create brand new, bare images. Add text, watermarks, and image elements in layers, and customize size, bit depth, and background contents to suit your subject. Duplicate layers to work on individual parts of images without affecting others.
