

Gemstone

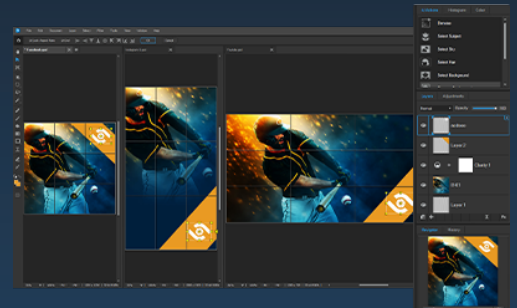

Photo Editor 16

Edit at the Speed of Your Imagination

Are you ready to make it happen? Easily go from imagination to image with powerful Artificial Intelligence (AI), infinite layers, non-destructive RAW editing, and a multi-document interface (MDI) that moves as fast as your ideas. Whether it's the composite you've been sketching out, the fine art series you've been meaning to start, or the shot you almost got, you can create it with ACDSee Gemstone Photo Editor 16.

Multi-Document Interface (MDI)

The days of working on a single file at a time are long gone. Gemstone's Multi-Document Interface (MDI) lets you have multiple images open simultaneously in split or child views, with Universal tool settings that keep everything in sync. Compare edits side by side, build cohesive visual sets, and move between projects without breaking your flow.

Layered Editing

Whether you're making pixel-perfect edits or building something from the ground up, Gemstone's layered editor keeps pace. Stack images, text, and shapes on infinite layers. Use AI-fueled filters and one-click AI Actions to handle the heavy lifting, fast. Apply layer masks, blend modes, and more until it looks exactly right. Gemstone gives you the tools to refine and the freedom to reinvent.

Non-Destructive RAW Photo Editing

RAW editing in Gemstone is fast and flexible. AI Presets and AI-driven masking crush complex adjustments, and since everything is non-destructive, you can revisit and refine without affecting the original image. Dial in color and light with Color & Tone Wheels and Light EQ™, or go deeper with Luminance and Color Range Masking to isolate exactly what needs work. Spend less time laboring over your photos and more time sharing them.

What's New in ACDSee Gemstone Photo Editor 16?

NEW

AI Denoise

AI Denoise uses advanced machine learning to automatically target pixelated noise while preserving critical detail. Instantly refine high-ISO images or shots taken in challenging lighting to maintain a natural, sharp, and professional finish. AI Denoise ensures your photos remain clean, detailed, and true to life.

**NEW**

AI Hair Masking

Save even more time while editing your photos by letting Gemstone's intuitive AI Hair Masking make one-click hair selections for you. This allows you to adjust the color and lighting of one of the trickiest elements in portrait photography – hair – without affecting the rest of the image.

NEW

AI Presets

Intelligent, non-destructive style at your fingertips. AI Presets are an absolute game-changer for hobby and commercial photographers alike. The AI analyzes your photo and applies gorgeous adjustments, significantly reducing the time you spend editing. Make your subject pop, correct background lighting, or imprint your authentic style with just a click.

**NEW**

Improved AI Face Edit

Control individual hair color and clarity with adjustments for Temperature, Tint, Saturation, and more in the new Hair Group added to AI Face Edit. Options for natural and unnatural hair colors give you full creative freedom to remain organic or push past societal norms. Easily blend out blemishes, not texture, with the Splotch Removal tool added to the Skin Group.

NEW

Improved File Support: JPEG XL

ACDSee Gemstone Photo Editor 16 is ready for the next generation of image formats with support for opening, editing, and saving files in JPEG XL (JXL). Positioned to modernize digital image storage and transmission, JPEG XL offers much better efficiency and quality for photography and digital art than plain old JPEG.

NEW

Before/After Slider in ACDSee RAW

Compare edits instantly with the Before/After Slider in ACDSee RAW. Drag the vertical bar to see the original image on the left and your adjustments on the right for accurate, real-time previews.

NEW

Improved Clone Tool

The Clone Tool now shows a live preview before placing the cloned content. Align lines, textures, and shadows accurately before committing changes for more intuitive editing.
